

Poverty-stricken adults more likely to be calcium-, vitamin D-deficient

10 September 2020

(HealthDay)—Adequate calcium and vitamin D intake in older Americans is greatly influenced by ethnicity, sex, household income, and food security, according to a study recently published in *PLOS ONE*.

Keri Marshall, from Pharmavite in West Hills, California, and colleagues studied the [relationship](#) between calcium and vitamin D intake and poverty (an annual [household income](#) of
