

New vaccine breakthrough lifts global hope against pandemic

16 November 2020, by Afp Bureaus

Good news on vaccines has stoked hopes, but experts warn there are still months of hard times ahead

Global hopes of vanquishing the coronavirus pandemic were boosted Monday after a vaccine was found to be nearly 95 percent effective in a trial, bringing much-needed optimism amid surging infections and grueling new restrictions.

The news from the US biotech firm Moderna comes after similar results were announced last week for a vaccine candidate developed by pharma giant Pfizer and its German partner BioNTech.

Major stock markets surged Monday in response, building on a boom sparked by the Pfizer news one week ago.

Top US infectious disease expert Anthony Fauci hailed the results, telling AFP that the data exceeded expectations.

"The idea that we have a 94.5 percent effective vaccine is stunningly impressive," he said.

Moderna, whose results stem from a clinical trial of

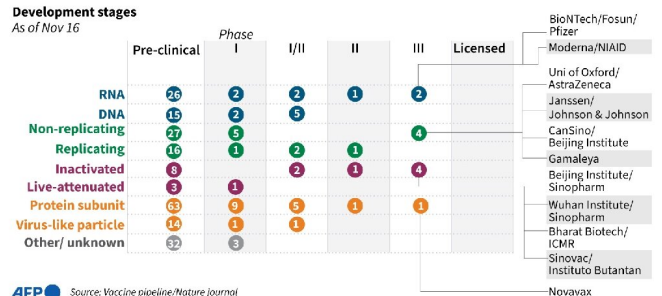

more than 30,000 participants, expects to have approximately 20 million doses ready to ship in the United States by year-end.

Yet with widespread availability of any vaccine still far off, governments around the world are clamping down with unpopular but life-saving restrictions on free movement, gatherings and business.

In the United States, President-elect Joe Biden expressed frustration over Donald Trump's refusal to cooperate on the White House transition process, saying "more people may die" of coronavirus without immediate coordination on fighting the surging pandemic.

Race for a COVID-19 vaccine

There are currently 260 vaccine candidates being tracked by the London School of Hygiene and Tropical Medicine

The US is already the country worst-hit by the virus.

Globally, infections have neared 55 million with more than 1.3 million deaths, and experts caution there are still difficult and dangerous months ahead.

"A vaccine on its own will not end the pandemic," warned World Health Organization head Tedros Adhanom Ghebreyesus.

Supply will initially be limited to healthcare workers and other vulnerable populations, which could offer major help to hospital systems but will "still leave the virus with a lot of room to move," he said.

British PM isolating

In hard-hit Europe, curbs have returned—often in the face of protests—from Greece to Britain, where COVID-19 survivor Prime Minister Boris Johnson was self-isolating out of precaution Monday after coming into contact with an MP who later tested positive for the virus.

Sweden, which has drawn attention for a softer approach to combating the virus, decided Monday to ban gatherings of more than eight people for the first time.

"It's going to get worse. Do your duty and take responsibility for stopping the spread of the virus," said Prime Minister Stefan Lofven.

France is using aircraft to transfer patients between hospitals amid its new wave of cases

And in Germany, which began a new round of shutdowns earlier in the month, Chancellor Angela Merkel was pushing for tighter measures such as masks in all schools and smaller class sizes.

While new cases were plateauing in Germany, daily numbers, officials said, were still too high.

But Merkel said state premiers did not have any appetite to up the ante and introduce tougher curbs to bring down infection numbers.

Austrian Chancellor Sebastian Kurz announced over the weekend that the country was tightening restrictions to get spiraling infection numbers under control.

Schools and shops will be shut from Tuesday until December 6.

In neighboring Belgium, the government said it intends to make any coronavirus vaccine available free of charge.

"The objective is to vaccinate at least 70 percent of the population," Health Minister Frank Vandenbroucke stated at a health conference.

US President-elect Joe Biden has criticized outgoing President Donald Trump for refusing to coordinate with his transition team on addressing the coronavirus pandemic

US reeling

Infections in the United States, meanwhile, show no sign of relenting after one million new cases in less than a week pushed the total number to 11,190,611, with 247,116 deaths.

The spikes have prompted new curbs in various states, while experts warn families against large gatherings for the upcoming Thanksgiving holiday.

A stay-at-home advisory came into force Monday in the country's third-biggest city, Chicago; while New York, an earlier outbreak epicenter, was also trying to flatten a second curve.

US markets shrugged off a resurgent COVID's potential economic impact, focusing instead on the vaccine news, with the Dow Jones and S&P 500 closing Monday at record highs.

Responding to the Moderna vaccine news on Twitter, Biden hailed the breakthrough as hopeful but called for continued "social-distancing and mask-wearing."

Trump, on other hand, tried to take credit for the advancement.

"Please remember that these great discoveries, which will end the China Plague, all took place on my watch!" Trump wrote.

Testing including at drive-in sites has revealed a million new cases in less than a week in the US

But Fauci, who heads the National Institutes of Allergies and Infectious Diseases, warned it would be crucial to convince people to take the vaccine, particularly in the US, where anti-vaccine sentiment runs high.

"A vaccine with a high degree of efficacy is of no use if nobody gets vaccinated," he said.

Australian cluster

Concerns of a resurgence also remain in parts of the world that have largely brought their caseloads under control.

Canada, in the midst of a second wave, recorded 301,332 infections Monday with 11,000 deaths.

Australia's Adelaide, which had not seen a significant outbreak in seven months, reported that a new cluster of 17 cases was linked to a hotel used to quarantine travelers returning from overseas.

Authorities snapped back a roster of restrictions and suspended international flights into Adelaide.

In Hong Kong, the government further tightened restrictions from Monday on the number of people in bars and restaurants, to guard against a spike.
